Nazca Safety Cover

The Nazca safety cover is a manually operated tracked safety cover that has been developed to fit our 4m x 2m and 8m x 2m Nazca wooden pools. The cover system is perfect for preventing children and animals from accessing the pool and also provides added protection against heat loss, debris ingress and algae growth. Providing the water is kept at a normal operating level, the cover can also be used as a winter debris cover. A safety cover pump is required to keep standing water off the cover. Excess water on top of the cover will make it difficult to use and could lead to damage or injury. Suitable precautions should be taken to prevent frost damage.

For above ground/standard Nazca installations, the mechanism can be mounted horizontally (*as shown below*) giving a stylish, low profile finish.

For deck level/submerged Nazca installations, the mechanism can be mounted on the decking.

The cover comes in grey as standard to compliment the colour of the timber. If another colour is specifically required, please contact us and we can provide a quotation. Please note that the safety cover will fit the 4m x 2m and 8m x 2m models only.
